DFIR Memory-Triage Report — `contact_me` (1 GiB raw RAM) — Executive Summary

> CONFIDENTIAL — Internal DFIR / Examiner use
>
> Memory-forensics triage of a 1 GiB raw RAM capture. Unprofileable image: Volatility3 2.28.0 could not validate a Windows kernel symbol table — no clean-or-compromised determination is possible.

Field	Value		Field	Value
Case ID	`CTF-CONTACT-ME-MEM`		Severity	🟡 Medium
Examiner	victor.galvan		Snapshot (UTC)	2026-06-07T12:40:26Z
Report ID	`e9763e7eda4892b0895631ebd24b915373ec31dbc85e10dff1d1ed8566a10908`		Generated (UTC)	2026-06-07T12:40:26Z
MCP host	`<TAILNET-HOST>`		Seal	`hmac-sha256:caa3c5618997c893…629f779`

Bottom line

> The `contact_me` capture cannot be analysed with the current Volatility3 symbol set — every kernel-dependent plugin returned placeholder or empty results. This is an honest negative-control outcome, not a "clean" verdict. Remediation is to re-acquire with a known OS/build or supply a matching kernel symbol table, then re-run; draw no compromise conclusions from this capture.

KPIs

KPI	Value	KPI	Value
Approved findings	1	MITRE techniques	0
Hosts in scope	1	Initial access	Inconclusive
IOCs catalogued	0	Attacker dwell	N/A

Risk matrix

Impact ↓ / Likelihood →	1 Rare	2 Unlikely	3 Possible	4 Likely	5 Almost certain
5 Severe	·	·	·	·	·
4 Major	·	·	·	·	·
3 Moderate	·	·	F1 🟡	·	·
2 Minor	·	·	·	·	·
1 Negligible	·	·	·	·	·

Top findings

1. 🟡 `F-CONTACTME-001` — Memory image unprofileable (Medium) — Volatility3 2.28.0 could not validate a kernel symbol table; pslist/netscan/malfind/svcscan returned placeholder or empty results, so no determination is possible.

Headline recommendation

[P1] Re-acquire or re-identify the host OS/build and supply Volatility3 with a matching kernel symbol table, then re-run the memory captures; treat the current empty/placeholder outputs as not-resolvable, never as clean.

Disk recall 72/72 (100%) · Memory recall 108/118 (91.5%) · 4464 tests (canonical, .crew/facts.md).
