

AMF Windows sample001 — Memory-Triage Forensic Report — Executive Summary

🟡 OFFICIAL — SENSITIVE (DFIR / training case)

Volatility 3 triage of a 511 MiB raw Windows XP RAM image. One medium-severity finding approved and sealed: 15 RWX injected-code regions recovered by `malfind` , concentrated in `winlogon.exe` .

Field	Value		Field	Value
Case ID	AMF-WIN-SAMPLE001		Severity	🟡 Medium
Examiner	victor.galvan		Snapshot (UTC)	2026-06-06T23:17:52Z
Report ID	3c5261e7abc4fb7de891e0ee4347ead2519d6414b16cef8198a43dcb2347e634		Generated (UTC)	2026-06-07

Bottom line

🟡 F-AMF-S001-001 : `get_malfind` recovered 15 RWX (`PAGE_EXECUTE_READWRITE`) memory regions — 10 of them inside `winlogon.exe` — a strong Process-Injection (T1055) signal. The finding was validated, persisted under an evidence-gate token, approved, and HMAC-sealed. No network sockets were recovered (honest empty result); the process forest was otherwise clean (2 roots, 0 orphans, 0 LOLBin flags).

KPIs

KPI	Value	KPI	Value
Approved findings	1 (medium)	MITRE techniques	1 (T1055)
Hosts in scope	1 (sample001)	Initial access	Not determined (RAM-only)
IOCs catalogued	0	Attacker dwell	Indeterminate

Risk matrix

Impact ↓ / Likelihood →	1 Rare	2 Unlikely	3 Possible	4 Likely	5 Almost certain
5 Severe	.	.	.	.	.
4 Major	.	.	.	.	.
3 Moderate	.	.	● F1	.	.
2 Minor	.	.	.	.	.
1 Negligible	.	.	.	.	.

Top findings

1. ● F-AMF-S001-001 — 15 RWX injected-code regions recovered by malfind, concentrated in winlogon.exe (×10) (Medium) — Process Injection (T1055); approved and HMAC-sealed.

Headline recommendation

[P1] Dump and disassemble the 10 RWX VADs in winlogon.exe (PID 628) to confirm whether the injected regions are malicious shellcode or benign JIT/unpacked code, and to extract any embedded IOCs.

Disk recall 72/72 (100%) · Memory recall 108/118 (91.5%) · 4464 tests (canonical, .crew/facts.md).

Evidence gate: PASS (single-scope mutation token, HMAC-sealed; approval was demo automation, not

human-attested). Full report: see comprehensive report
