

Memory-Triage Report — MEMDUMP-RAW-2014 —

Executive Summary

INTERNAL · DFIR EXAMINATION RECORD

Live-memory triage of a generic 512 MiB raw capture (circa 2014) — honest-negative outcome: no profile-matchable kernel symbol table, so no processes, sockets, services or injected code resolved. Inconclusive by data quality, not a clean-host finding.

Field	Value		Field	Value
Case ID	MEMDUMP-RAW-2014		Severity	● Low / informational
Examiner	victor.galvan		Snapshot (UTC)	2026-06-07T12:40:49Z
Report ID	778d18c3357516a41287d10f7ee3bbc38a0d2d894fe19a939752905f15317f9e		Generated (UTC)	2026-06-07T12:40:49Z
MCP host	<TAILNET-HOST>		Seal	HMAC-SHA256 · 1 approved finding

Bottom line

● The raw 512 MiB image is not profile-matchable: Volatility3 (2.28.0) cannot validate kernel.layer_name / kernel.symbol_table_name , SO pslist / netscan / malfind / svcscan all returned empty. No malicious activity was found, and none could be ruled out — the dataset is structurally inconclusive. The platform recorded this honest negative (finding F-MEMDUMP-001 , low) instead of fabricating artefacts.

KPIs

KPI	Value	KPI	Value
Approved findings	1	MITRE techniques	0
Hosts in scope	1	Initial access	Unknown / not determinable
IOCs catalogued	0	Attacker dwell	N/A

Risk matrix

Impact ↓ / Likelihood →	1 Rare	2 Unlikely	3 Possible	4 Likely	5 Almost certain
5 Severe	.	.	.	.	.
4 Major	.	.	.	.	.
3 Moderate	.	.	.	.	.
2 Minor	.	.	.	.	.
1 Negligible	 F1	.	.	.	.

No adversary behaviour resolved. F1 is a data-quality observation (negligible impact, rare), not a threat.

Top findings

-  F-MEMDUMP-001 — Raw 512 MiB image has no profile-matchable kernel symbol table (Low) — `pslist` / `netscan` / `malfind` / `svcscan` all empty; no injected/RWX code assessable; unattributed 2014 capture. Honest negative, confidence 0.9.

Headline recommendation

[P1] Treat the image as unattributed and not profile-matchable — do not infer process, network, or injected-code conclusions from the empty results (absence = "not resolvable", not "clean"); re-acquire with provenance or attempt non-Windows analysis paths before re-triage.

Disk recall 72/72 (100%) · Memory recall 108/118 (91.5%) · 4464 tests (canonical, .crew/facts.md).

Evidence gate: enforced (write-scoped mutation token). Full report: see comprehensive report
