

SRL-2015-APT-ENTERPRISE — Executive Summary

Case **SRL-2015-APT-ENTERPRISE** · Agentropix-SIFT Forensic Pipeline

Case ID: SRL-2015-APT-ENTERPRISE Snapshot: 2026-06-10T19:31:30.472433+00:00 Report ID: 98bbfc3773232ddb9322bfb...
Hosts: 4 Approved findings: 17 IOCs (enriched): 109 Malicious IOCs: 12

Verdict

CONFIRMED MULTI-HOST APT INTRUSION. Forensic analysis of 4 hosts (disk + memory) produced **2,233** findings; ~**2,874** evidence records are live on Wazuh. **17** findings were reviewed and approved, including **1 critical** domain-controller command-and-control implant. Threat-intel enrichment of 109 indicators confirmed **12 malicious** IOCs (VirusTotal + AlienVault OTX), establishing active attacker infrastructure, custom malware, lateral movement, and data exfiltration.

HOSTS COMPROMISED

1

CRITICAL FINDINGS

14

HIGH FINDINGS

12

MALICIOUS IOCS

Key Findings

- Critical — DC command-and-control.** An auto-start C2 implant (usboesrv.exe, KernelPro USB-over-Ethernet) on the domain controller (win2008R2) beacons to 96.255.98.154:29932; corroborated by Volatility3 + Mandiant Redline.
- Exfiltration confirmed.** Collected R&D / classified data staged and archived (system4.rar, header-encrypted) and exfiltrated over a physical USB device (HP v100w S/N AA951D0000007252) on win7-64-nfury.
- Lateral movement & valid accounts.** PsExec hub-and-spoke movement from the xp-tdungan operator console using compromised domain account SHIELDBASE\vibranium reused across hosts.
- Custom in-memory malware & anti-forensics.** PyInstaller/Metasploit reverse-TCP loaders, masqueraded svchost.exe HTTP backdoors (httpump), and timestomping / indicator-removal across nromanoff.
- 12 malicious indicators** confirmed by external threat intelligence and pushed live to Wazuh active-response CDB lists.

The 12 Malicious Indicators

Indicator	Type	VT (mal/total)	Assessment
5420d06d802ce015301578347c529405f7015a59a47097...	sha256	1/75	DC C2 implant usboesrv.exe (KernelPro USB-over-Ethernet)

Wazuh / Containment Status

Wazuh push status — DRY-RUN VERIFIED, LIVE FINDINGS PUSH BLOCKED (safety hold).

Findings: dry-run validated all **2,233** findings successfully (dry_run_ok=true). Live indexing was **intentionally blocked**: the sanctioned wazuh _index_findings bulk path auto-generates _id (no deterministic finding_id keyed mapping), so a live re-push would **duplicate** rather than replace. The index already holds **2,194** SRL-2015 docs (1,590 distinct, 604 dup); ~**2,874** evidence docs are live across the case. A non-destructive deterministic-_id fix is not exposed by the approved tool, and editing the sealed orchestrator / ADR-016 is a Hard-Stop — so the run halted rather than pollute evidence.

IOC threat-intel lists (Wazuh CDB) — LIVE and merged. SRL-2015 malicious indicators are live in the active-response CDB lists: agentropix_malware_sha256 (47 total · 37 SRL-2015), agentropix_c2_ips (8 · 6 SRL-2015), agentropix_persistence_regkey (4 · 3), agentropix_suspect_process (8 · 3). Vanko-case IOCs preserved (no deletions).

Console evidence

Live Wazuh console — malicious IOC discovery for case SRL-2015-APT-ENTERPRISE.

Recommended Actions

- Contain now:** isolate all 4 affected hosts; block C2 egress to 96.255.98.154 and 199.73.28.114 at the perimeter.
- Credentials:** disable / rotate SHIELDBASE\vibranium and all domain accounts observed reused across hosts; force enterprise-wide password reset and audit Kerberos tickets.
- Eradicate:** remove the usboesrv service and unsigned usboebusdrv/usboeloaderdrv kernel drivers from the DC; hunt the 12 malicious hashes enterprise-wide using the live Wazuh CDB lists.

- **Data-loss response:** treat exfiltrated Vibranium/Alloy R&D + classified material as breached; engage legal/IR per disclosure obligations. Physically recover/quarantine HP v100w USB device.
- **Resolve Wazuh push hold:** add a deterministic `_id=finding_id` ingest path (approved change) so the 2,233 findings can be indexed without duplicate-evidence pollution.
- **Forensic preservation:** maintain chain-of-custody on all images; the approval-gated findings carry HMAC seals for evidentiary integrity.
