ATT&CK

Inconcl.

INITIAL ACCESS

Headline: Memory-resident code injection confirmed in explorer.exe (PID 1944) — a 64 KB RWX VAD at 0x4320000 holding shellcode (41 ba 80 00 00 00 48 b8 ... 48 ff 20, payload SHA-256 65196e1a...1726ca6f), plus a large 512 KB RWX region in WmiPrvSE.exe (PID 2292). T1055 Process Injection confirmed; T1047 WMI execution suspected. **Recommended:** isolate the host and acquire the disk image to recover the injector and persistence — RAM alone cannot establish the entry vector.

RISK MATRIX

5				F4	F1
4					
3			F2		
2			F3		
1	F5				
	1	2	3	4	5

X: Likelihood (1-5) · Y: Impact (1-5) · qualitative (operator-derived)

TOP FINDINGS

HIGH

PAGE_EXECUTE_READWRITE injected region in explorer.exe (PID 1944)

malfind flagged a 64KB PAGE_EXECUTE_READWRITE VAD at 0x4320000 in explorer.exe (PID 1944) carrying executable indirect-jump shellcode bytes (41 ba 80 00 00 00 48 b8 ... 4

MEDIUM

PAGE_EXECUTE_READWRITE zeroed RWX region in explorer.exe (PID 1944)

malfind flagged a second 4KB PAGE_EXECUTE_READWRITE VAD at 0x3ce0000 in explorer.exe (PID 1944), zeroed - a second RWX VAD in the same injected host process.

MEDIUM

PAGE_EXECUTE_READWRITE RWX region in chrome.exe (PID 2124)

malfind flagged a 4KB PAGE_EXECUTE_READWRITE VAD at 0x4830000 in chrome.exe (PID 2124), zeroed.

HEADLINE RECOMMENDATION

P1 Isolate notch-it-up and acquire the full disk image. RAM confirms T1055 code injection in explorer.exe (64 KB shellcode) and a 512 KB RWX region in WmiPrvSE.exe (T1047), but the injector, persistence and initial-access vector are not recoverable from memory alone — disk forensics is required to close the case.
