memdump — Generic Raw Memory Dump (2014)

512 MiB raw RAM · memory triage inconclusive — no OS profile resolved

Case MEMDUMP-RAW-2014

Examiner victor.galvan

Severity low (sole finding)

Snapshot 2026-06-07T01:35:39Z

INITIAL ACCESS

Inconclusive / not profile-matchable. This unattributed raw 2014 image has no kernel symbol table Volatility3 can validate, so pslist, netscan, malfind and svcscan all returned empty. No compromise can be confirmed or ruled out from RAM alone — expected behaviour for an unprofileable capture, not a verdict.

TOP FINDINGS

LOW

F-MEMDUMP-001 · No profile-matchable kernel symbol table

Vol3 2.28.0: Unable to validate kernel.layer_name/symbol_table_name. pslist=11 placeholders, netscan=0, malfind=0, svcscan=0, process tree=1 unknown root / 0 LOLBin. Confidence 0.90. Honest negative — sealed.

HEADLINE RECOMMENDATION

P1

Re-acquire or source companion evidence (disk image / pagefile / a capture with a declared OS build), or attempt out-of-band OS identification — the raw RAM alone is not profile-matchable, so memory triage cannot proceed. Treat the case as inconclusive, not clean.
