N/A

INITIAL ACCESS

Headline: 9 RWX (PAGE_EXECUTE_READWRITE) injected/unpacked-code regions in winlogon.exe (PID 628) — the dominant, canonical process-injection signal (MITRE T1055) in this image — alongside single RWX regions in csrss.exe and msimn.exe. Severity is capped at **medium**: this is a known teaching sample and the highest-confidence signal is memory-resident with no corroborating network or on-disk artefact.

RISK MATRIX

5					
4					
3			F4	F1,F2	
2		F3,F5			
1		F6			
	1	2	3	4	5

X: Likelihood (1-5) · Y: Impact (1-5) · qualitative (operator-derived)

TOP FINDINGS

MEDIUM

F-AMF-S001-001

malfind recovered 15 executable VAD hits (11 PAGE_EXECUTE_READWRITE / RWX, 4 PAGE_EXECUTE_READ / RX) across 5 processes; RWX concentrated in winlogon.exe (PID 628, x9)

MEDIUM

F-AMF-S001-002

9 RWX (PAGE_EXECUTE_READWRITE) malfind regions in winlogon.exe (PID 628, ppid 356) — dominant injected/unpacked-code concentration

LOW

F-AMF-S001-003

2 PAGE_EXECUTE_READ (RX, not RWX) malfind regions in lsass.exe (PID 692) — read-execute, no write permission

HEADLINE RECOMMENDATION

P1 Dump and statically analyse the 11 RWX (PAGE_EXECUTE_READWRITE) VAD regions — 9 of them in winlogon.exe (PID 628) — to confirm whether the injected/unpacked code is malicious. Then obtain a human examiner HMAC sign-off (the demo approval was Playwright-automated).

SEALED · report 22560e04e9b123a0... · 6 approved findings · first-finding seal hmac-sha256:fd05a9d4c2721e5a693b03b55d06ce
ea7cbe8429056fa93338800baeb8ed9cee · examiner victor.galvan · approved 2026-06-06T23:17:43Z (NOTE: F-AMF-S001-001 approval was Playwright-automated demo, not human HMAC sign-off)
